

Radisson Blu Split

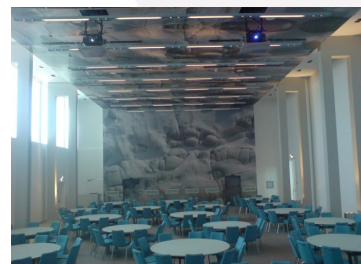

The conferencing facilities of the Radisson BLU Resort hotel in Split offer a total of nine conference and meeting rooms.

The large conference room is equipped with cutting edge technology and is fully adapted to meet the requirements of even the most challenging business or social gatherings.

The conference room consists of the following equipment:

- two video projectors with ceiling lifts (Panasonic PT-D6000E, AV Stumpfl, SVS Lifts)
- a conference system (JBL CBT series, BSS SoundwebLondon, Crown)
- a microphone system - installed and wireless (AKG Acoustics)
- a central controlling system (AMX)
- an induction loop system for individuals with special needs (the hearing impaired) (AMPETRONIC)

The hotel's business centre offers six smaller conference rooms and two meeting rooms. Two rooms

can be transformed into one fully functional conference room by simply removing the partitions. Furthermore, the centre has four video projectors (Panasonic PT-LB90NTE), four professional plasma screens (Panasonic 65" 50" i 2x42"), an audio conferencing system (JBL Control contractor, Samson), and a central controlling system (AMX).

Other than the conference room systems, the hotel has a voice alarm system (EVAC), entirely made in accordance with the standard HR- EN 60849:2008 en. Along with the possibility of playing ambient music, the system ensures a timely reaction in case of a fire or the need to evacuate the facility. With 32 zones, more than 700 speakers, and 10 local control units, the system was designed as the hotel's PA system as well.

The link to the automatic fire alarm system and the autonomous power supply that ensures the system's functioning even in the event of a power outage, guarantee that the guests will be alarmed in due time should any type of extraordinary situation occur.
