

PA system for stadium Stožice, Ljubljana

AVC provided all the equipment necessary for the operation of the central PA system and emergency evacuation PA of the new stadium Stožice in Ljubljana. Superior sound is ensured by high power JBL loudspeaker systems powered by powerful and efficient Crown amplifiers, while top level mixing is done on the Soundcraft's acclaimed MH Series audio mixer. The stadium is equipped with a wireless AKG microphone system and a dbx loudspeaker management system. We built the emergency evacuation PA around an Esser programmable digital system and IC Audio speakers.
