

Litepanels LED lighting

With the help from AVC, high-quality Litepanels LED lighting was installed in the news studio of the leading commercial television network in Croatia, Nova TV. After the switch to HD recording, it was obvious that equipment of higher quality than the standard halogen lighting normally used in TV studios was needed.

Miljenko Logožar, technical director at Nova TV, says: "Litepanels LED lighting has definitely lived up to our expectations. No more excessive heating, and huge savings in maintenance have created a better working environment for us and, not less important, reduced the power consumption from 18 kW to only 900W, without any negative effect on the environment."
