

Multimedia hall

The data collected and analyzed by different services and departments of the Public Health Institute provides a quantity and quality perspective on the Croatian population's health conditions, living environment and organization, functioning and usage of health services on all levels of health care. The multimedia hall system provides high-tech support to all kinds of events to be held there. The hall's audio system is based on BSS-Soundweb platform and digital sound console TASCAM DM-24 with JBL loudspeaker system and AKG wireless microphone system. The integral part of the audio system is the high quality conference microphone system and simultaneous interpretation equipment with two interpretation booths by the renowned producer Danish Interpretation Systems - DIS. SONY LCD projectors and controlable PTZ cameras create video system for presentations, meetings, lectures, different recordings and transmissions, that in combination with POLYCOM videoconference system enable the transmission of events to distant locations. The entire audio/video system, as well as the halls' lighting and electric motor screens and curtains are centrally controllable from the integral AMX control panel system.
