

Equipment for studios and production control rooms in the new HRT building

During 2004 and 2005, the Croatian Radio Television (HRT) started new investments for ordering equipment and setting up modern studios and control rooms in the new building B30 in the television area. The equipment is designed for two TV studios with 1000 and 600m², and for one radio studio with 600m². High class equipment was delivered, we bring you some of it: multi screen splitter, process and distribution video equipment, UMDs (Under Monitor Display), converters of SDI signal into optical signal, etc.
