

Videoconferencing system for protected witnesses

For the purpose of court hearings and questioning the witnesses, in cooperation with the US Embassy, we have delivered and installed special videoconference systems that enable taking statements from the persons that are not present in court with jurisdiction, or the persons that are not on Croatian territory. Especially interesting are cases of war crime when persons who possess certain information, or who had even participated in certain crimes, are currently on the territory of another country. The decrypting of the communication channel is provided, so that the communication could not be intercepted by any third party. It is possible to protect the witness by distorting the voice and scrambling the picture. It is also possible to digitally record the hearing.
