

## Playout studio

In 2005 European Commission financially supported the Public Broadcasting Service of Bosnia and Herzegovina in commissioning equipment to complete the Service in the control, broadcasting and marketing. For this project AVC also delivered audio-video monitoring systems, servers for archiving and a playout server, routers and switchers for signal control and software for automation, archiving, playout and marketing of the leading company IBIS Ltd. UK, and the complete custom made furniture. The complete project is planned so the studio is ready to use, therefore the personnel operating the installed system underwent intensive training.
