

Digital audio mixing desk for RTV Slovenia S3

RTV Slovenija gives special attention to its informative programme. The technical execution and reliable equipment is just as important, as accurate and up-to-date news. The national television network decided to use the first EUPHONIX MaxAir digital mixing table in Slovenia for its main informative programme (Dnevnik, Odmevi, Poročila, Jutranji program). The table is designed around 106 channels, and high level of reliability is achieved with redundant components (power supply, DSP unit, console control surface).
