

PA system and video cube

The old-fashioned, unsuitable and partially defunct PA systems in two of the venue's largest halls in Zagreb have been replaced with new digitally processed systems. In the main hall entrance area AVC has implemented a new combined PA/paging system, while the third hall (where no permanent PA had existed) has been equipped with a small but powerful and versatile PA system. Together with the speaker line-arrays in the main hall, a set of four LED video display boards has been installed inside the first "video cube" in Croatia.
