

Professional audio system in Zagreb's famous night club Aquarius

The famous night club Aquarius in Zagreb – known for throwing the best parties in Zagreb with the finest DJ's – decided to make some changes in the club's interior. The managers of the club know that no party is complete without good audio equipment, so they decided to enter the new '08 summer season with the legendary JBL Professional sound system. Now the club is redesigned and has two floors – it is designed to provide the ultimate audio experience with the clearest sound system in Croatia. The sound system on the first floor is based on JBL Sound Power and Application Engineer loudspeaker series with Crown MacroTech amplification and DBX processing. The second floor is equipped with a 4-way active sound system based on the high power JBL Application Engineer loudspeaker series set with Crown MacroTech amplification and world's standard BSS Audio Omnidrive processing. Furthermore, this audio system upgraded the outside terrace too, so that the Aquarius daily ambiental audio system has a new quality. AVC Zagreb took over the complete installation of this JBL Professional audio system. It is important to notice that the world's best clubs like Capitale in New York, Matrix, Odeon, Wag and Ministry of Sound in London, Roxy in New York and Jockey Club in Hong Kong use the same audio systems.
