

Congress centre

AVC Zagreb has recently implemented top quality technology into one of Zagreb's congress centers, the Antunović, rendering its rightful place within the regional congress centre industry.

The AVC Zagreb project managers have enabled the central control of all halls of the congress centre by installing the AMX system.

Along with the AMX system to control the halls, the hotel is also equipped with Digital Signage - a digital system that provides information such as time schedule of events, weather forecast, stock market indexes in real time, exchange rate lists, clients' advertisements etc., via 47 networked monitors that are connected to the central control system. This information can be seen by everyone that passes in front of the hall.
